

"ACCESSORY FOR DRINKING GLASSES"

SUMMARY

ACCESSORY FOR DRINKING GLASSES that cools and
5 maintains the temperature of the glass contents thanks to
the presence of a thermal clamp (1), at the same time
providing protection from the direct action of the sun to
the external surface, in addition acting as an advertising
or informative carrier. In order to do this it is
10 constructed from a thermal clamp (1) that is adapted to the
shape of the glass (2) having an extension at one point
along its perimeter (3) with some union elements (4) at the
free end for the connection of the rod (5), at the other
end of which there are some connection elements (6) for the
15 fixing of the body (7) that acts as the advertising or
informative element. In turn, the rod (5) has a connection
element (8) at a point on its perimeter which clips onto
the rim of the glass to prevent the thermal clamp (1)
sliding down the glass.
